

HAD UNSAFE SEX AND HAD FLU-LIKE SYMPTOMS, FEVER, RASHES...

YOU MAY HAVE PICKED UP,
AND BE PASSING ON HIV.

Some guys who get
HIV will not experience
or recognise any
symptoms...

...while many guys
will experience one
or more.

Symptoms will
generally occur
between 2-6 weeks
after exposure to HIV.

**CONSIDER AN HIV TEST SO YOU CAN LOOK AFTER
YOUR OWN AND YOUR PARTNERS' HEALTH.**

Condoms are the most effective way to prevent HIV transmission.

For more info on HIV symptoms, testing and the location of clinics and doctors,
check out www.whytest.org or call the Gay Men's Health Hotline on 1800 009 448.
