

EVEN IF YOU FEEL WELL AFTER HAVING AN UNSAFE FUCK...

YOU MAY STILL HAVE PICKED UP,
AND BE PASSING ON HIV.

Some guys who get
HIV show no signs
of infection...

...while others get
flu-like symptoms,
fever and rashes.

Symptoms generally occur
between 2 - 6 weeks after
exposure to HIV.

**CONSIDER AN HIV TEST SO YOU CAN LOOK AFTER
YOUR OWN AND YOUR PARTNERS' HEALTH.**

Condoms and water based lube are the most effective way to prevent HIV transmission.

For more info on HIV symptoms, testing and the location of clinics and doctors,
check out www.whytest.org or call the Gay Men's Health Hotline on 1800 009 448.
